

Why would the FCC want to limit the information I receive from my satellite radio? I pay for XM radio so why does the NAB care besides trying to destroy XM radio for their own financial gain. The FCC even considering this proposal is a typical example of what is wrong with our government and corporate America today. I am discussing this outrage with my friends even though they do not have XM radio. They say what do I expect from our congress with their special interests and little concern with the desires of the common citizen. I will contact my representatives about HR4026 and greatly regret that I cannot vote against the bill's sponsors. I feel very strongly about this issue and intend to vote against my congressman this fall if this bill passes or any similar action negatively affects my radio. Censorship is not the American way! The NAB would be better served if they spent the efforts on cleaning their own house by raising the quality of their content.
